

Big Data Analytics Symposium — Spring 2026

Analytics Project: < Enter your project name here >

Team Name:

< Optional: Enter your team name, e.g., The Reducers >

Team:

< Enter the names of all team members here. >

<Your project name>

Abstract:

< Add a short description of your project >

Platform(s) where the application runs:

< Google Dataproc? Amazon AWS? Multiple platforms? >

<Your project name>

Motivation

Who are the users of this analytic? <Users>

Who will benefit from this analytic? <Beneficiaries>

Why is this analytic important?

< Short description of why this analytic is important >

<Your project name>

Goodness

What steps were taken to assess the 'goodness' of the analytic?

< Short description of why you believe the results of your analytic are correct and can be trusted. This should be domain-related, *i.e.*, goodness is not about data quality, it's about the quality of your analytic. >

<Your project name>

Data Sources

Name: <Data Source 1 Name>

Description: <Brief description...>

Size of data: <Size...>

Name: <Data Source 2 Name>

Description: <Brief description...>

Size of data: <Size...>

...

Name: <Data Source n Name>

Description: <Brief description...>

Size of data: <Size...>

<Your project name>

Data Sample: <Data Source 1 Name>

<Data Source 1 sample data — less than 20 lines is sufficient>

<Your project name>

Data Sample: <Data Source 2 Name>

<Data Source 2 sample data — less than 20 lines is sufficient>

<Your project name>

Data Sample: <Data Source n Name>

<Data Source n sample data — less than 20 lines is sufficient>

<Your project name>

Design Diagram

< Insert one or more design diagrams here. Diagrams should show inputs, outputs, tools used. >

<Your project name>

Code Challenge 1

<Show some interesting algorithms/code you wrote, or some coding challenge you had to overcome. There should be one Code Challenge slide per team member. >

<Your project name>

Code Challenge 2

<Show some interesting algorithms/code you wrote, or some coding challenge you had to overcome. There should be one Code Challenge slide per team member. >

<Your project name>

Code Challenge 3

<Show some interesting algorithms/code you wrote, or some coding challenge you had to overcome. There should be one Code Challenge slide per team member. >

<Your project name>

Results

1. <Result 1>

< Tell us a maximum of three results, insights, observations, or outcomes in the domain of your project (e.g., healthcare, crime, ...)

These are domain-related insights and should be described that way. In other words, performance of software, performance of an ML algorithm, and other coding-related information does not belong here.

For example: If this is a project that looked for influence of weather on COVID-19 — your findings about that belong here. >

2. <Result 2>

3. <Result 3>

<Your project name>

Obstacles

1. <Obstacle1>

< Tell us up to three obstacles you experienced in developing this analytic. >

2. <Obstacle 2>

3. <Obstacle 3>

<Your project name>

Summary

<Brief wrap-up!>

<Your project name>

Acknowledgements

<

- If you used an Amazon AWS voucher for this work, thank Amazon here.
- If you had help from HPC, thank them for their support here.
- If you used a Tableau free license, thank them here :)
- If you received data from some source that was kind enough to share their data with you, thank them here.
- If you worked with a domain expert, you know what to do...>
